PROJECT PHASE I

Team Name: Easy Doctor

Team: 37

Team members:

Johnny Salazar, ZhiYue Wang, XiuQi Yang, William Whittaker, Colton Hutchins

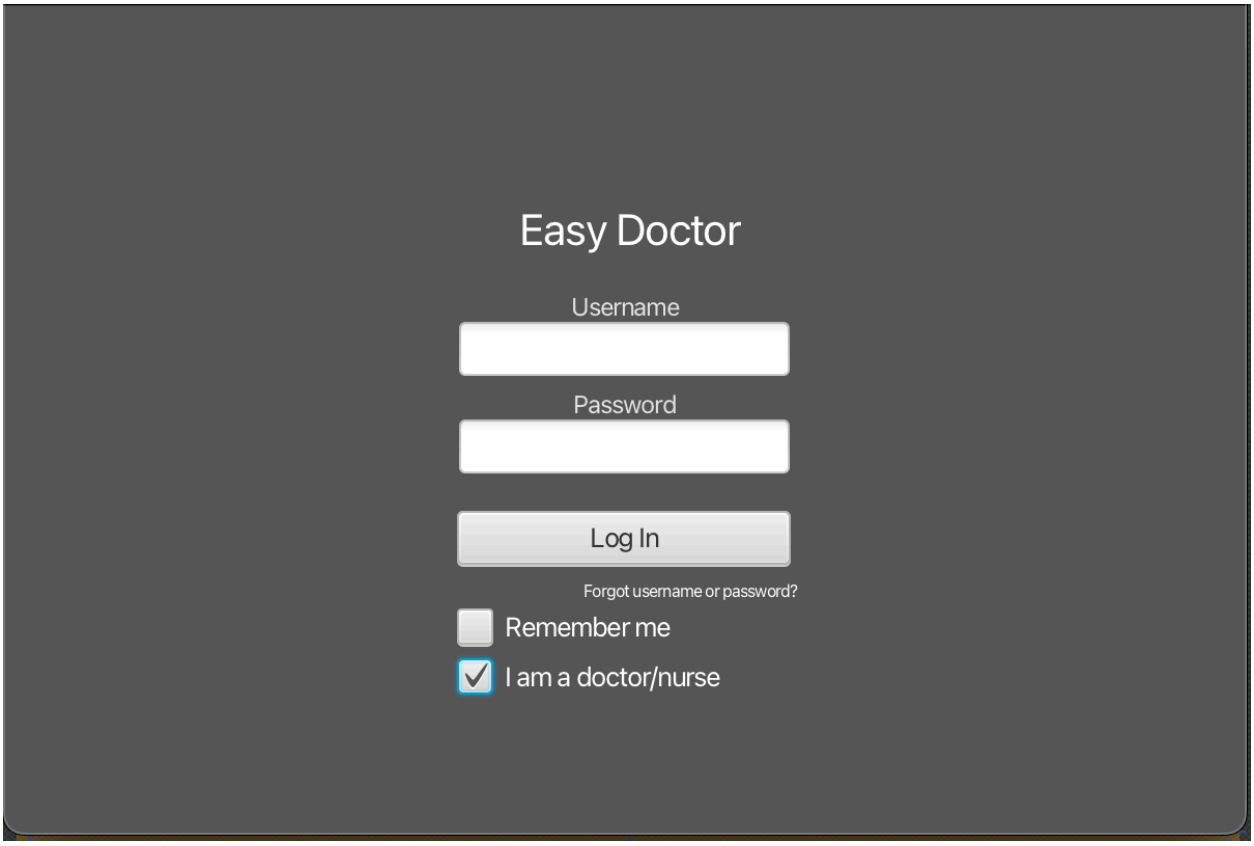
Project Requirements

Login Page

Stakeholder Requirements:

- **The login page must display the logo.**
- **Two textboxes for the username and password fields.**
- **A “Forgot Password” button.**
- **A “Remember Me” checkbox.**
- **A “I am a doctor/nurse” checkbox.**
- **A submit button, as well as an alert if the submission failed (for example, if the password was incorrect).**

The first page the user will see allows the user to authenticate using their account details and, upon submission, bring the user to the correct portal based on the information from their account and the checkbox indicating whether or not they are a patient. If the user fails to input the correct information to authenticate, the text “Incorrect Username or Password'' should appear. Additionally, the user can select the “I am a doctor/nurse” checkbox so that the system will load the correct portal (Work Portal if selected, Patient Portal if not).

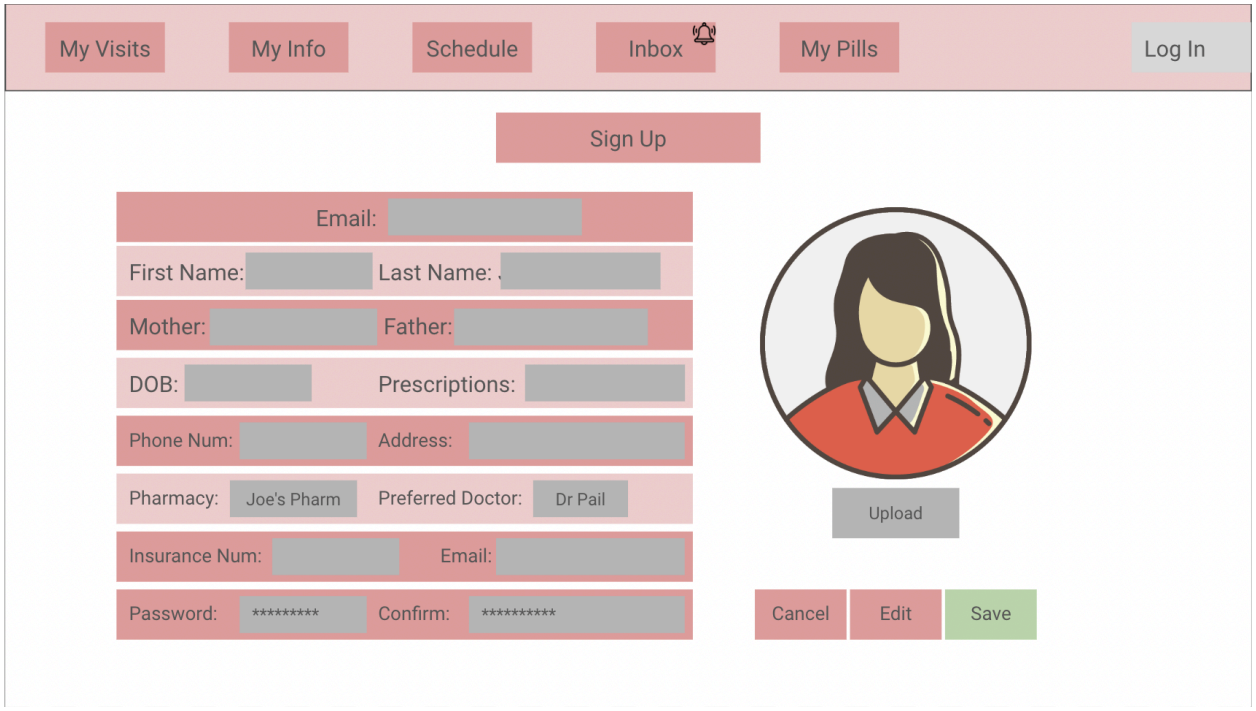


Sign Up Page

Stakeholder Requirements:

- **Textboxes for their username, password, first and last name, phone number, date of birth, email address (optional), pharmacy information, and preferred doctor (optional)**
- **Password confirmation**
- **Submit and Cancel buttons**
- **Alert if the patient already exists, the passwords don't match, or if required information is missing.**

This page should show when the user requests to become a patient. It will allow the user to input basic required information for the office to provide medical services, as well as their username and password for the patient portal. An alert will show if required information is missing or incorrect, the passwords differ, or if the patient is already registered in the office's system.

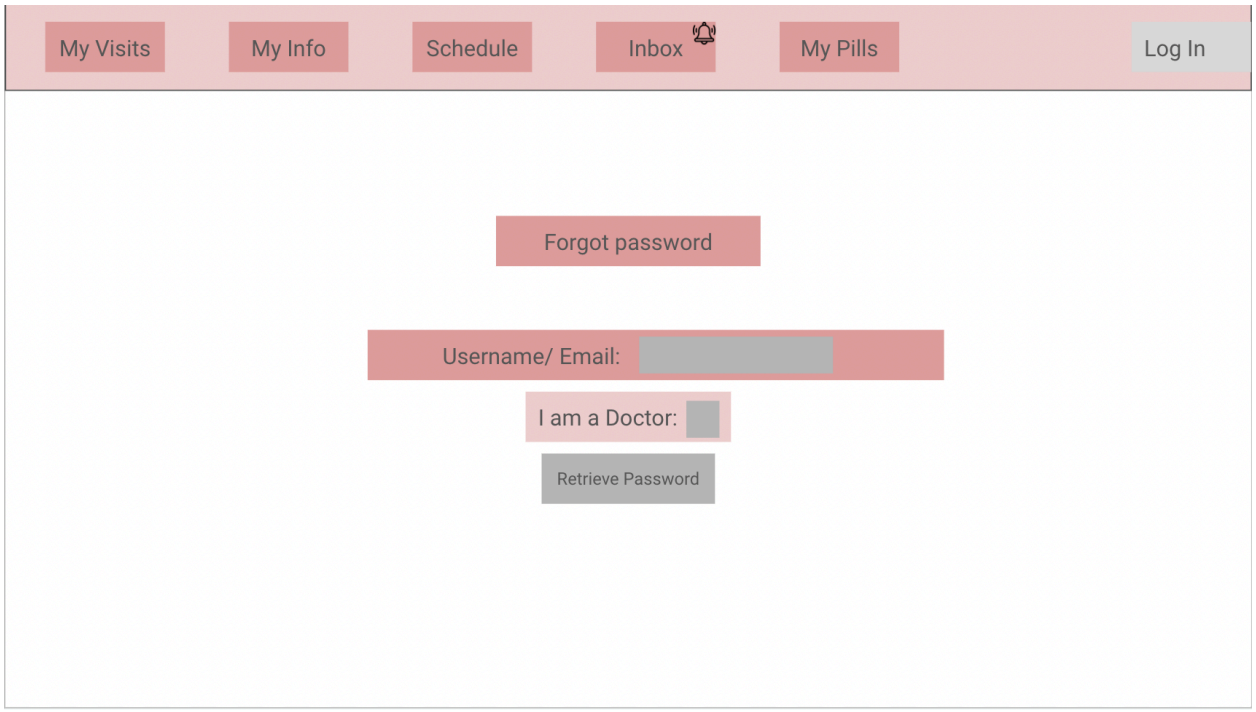


Forgot My Password Page

Stakeholder Requirements:

- **A username/email field**
- **A "Retrieve Password" button**
- **A "I am a doctor/nurse" checkbox**

The user will be able to enter in either their username or email associated with their account and click the “Retrieve Password” button. When clicked, the system will determine if an account with the entered username or email exists or not. If it does, an email will automatically be sent to the user’s email containing the password and the user will be alerted about it. Otherwise the user will be alerted that an account with that username or email does not exist and highlight the field in red.

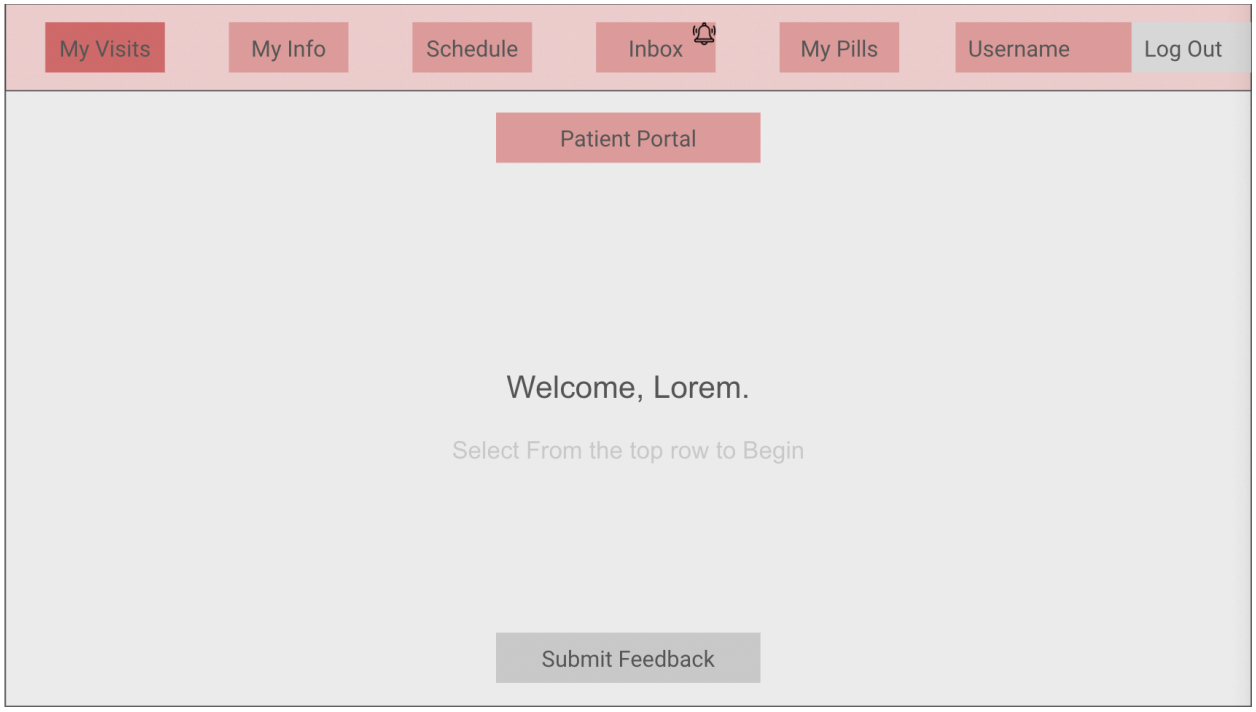


Portal Main Page

Stakeholder Requirements:

- **Buttons depending on whether you are a doctor (“Work Portal”) or a patient (“Patient Portal”)**
    - **Work Portal: Visits, Patient Records, Active Sessions, Inbox, Prescriptions Tool**
    - **Patient Portal: My Visits, My Information, Schedule Visit, Inbox, My Prescriptions**

- **A “Feedback and Survey” button**
- **A Logout button**



The user can click on any of the tabs to load the corresponding subpage. The user can also click the “Logout” button to log out of their account and the system will direct them to the Login Page.

Clicking on the “Feedback and Survey” button will open a popup with a text area. There will also be a “Send” button and “Cancel” button. Clicking on the “Send” button will send the feedback to the administrators of the system.

Portal Inbox Tab

Stakeholder Requirements:

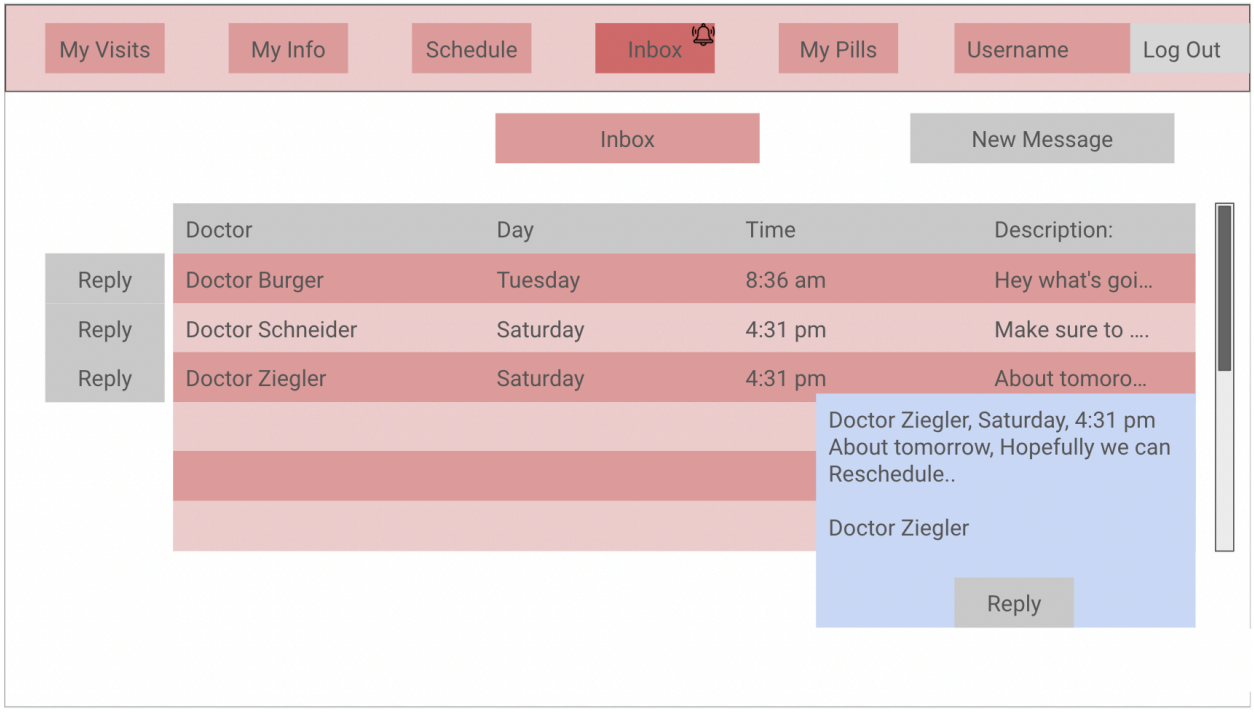
- **Display all of the user’s sent and received messages in chronological order in a scroll pane**
- **For each received message, display a “Reply” button and a “From” field**
- **For each sent message, display a “To” field**
- **A popup when clicking on a message**
- **A “New Message” button**
- **A 256 character limit for messages**

The user will see all of their sent and received messages in chronological order inside a scroll pane. When the user clicks on a message, a popup will display the content of the message.

If the message they clicked on is of type “Received”, there will be a “Reply” button. When clicked on, a second popup will appear allowing the user to reply. Clicking on this popup’s “Send” button will send the message. If the user clicks on “Cancel” instead, it will close the popup without sending the message.

If the message was instead of type “Sent”, no “Reply” button will be displayed. The user can only see the content of the message that they sent.

When clicking on the “New Message” button, a popup will be displayed allowing the user type in their message. Clicking the popup’s “Send” button will send the message and close the popup. Clicking on the popup’s “Cancel” button will close the popup without sending a message.



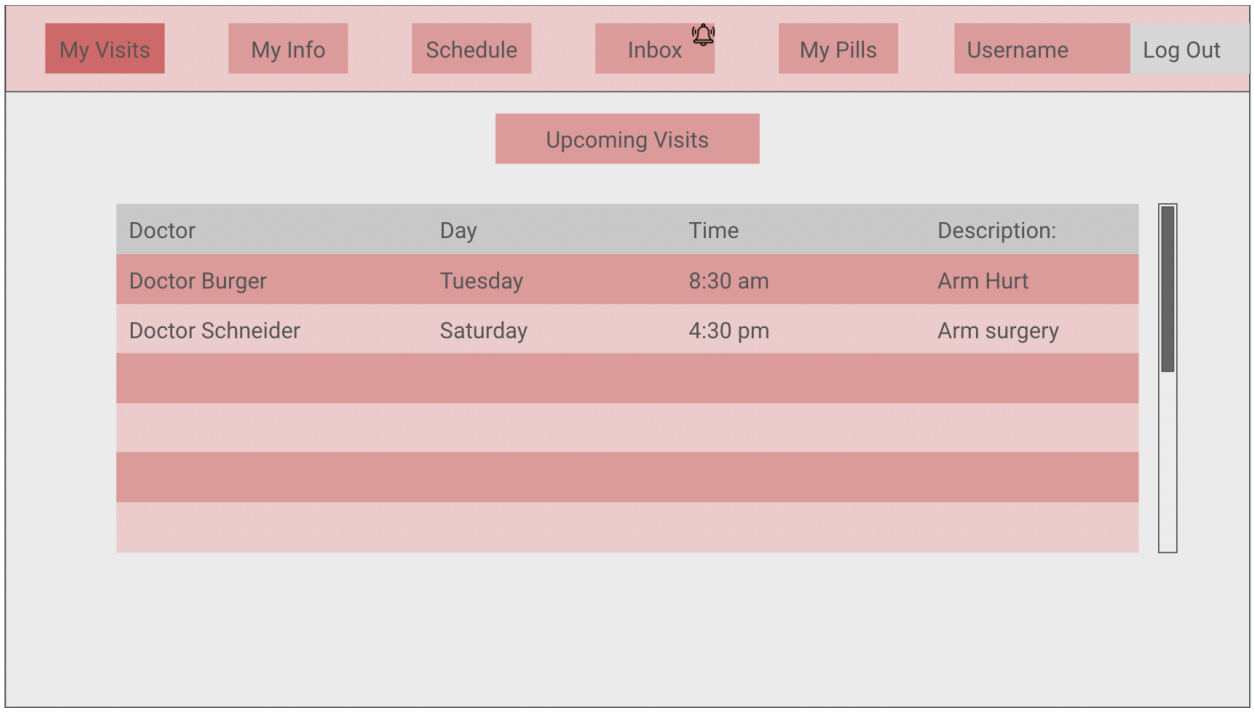
Patient Portal My Visits Tab

Stakeholder Requirements:

- **Display the user’s completed (green) and missed (red) and upcoming (blue) visits in chronological order.**
- **For each visit, display the patient’s nurse and doctor.**

- **When clicking on a completed (green) visit, open a popup containing the following information: doctor, nurse, reason for visit, visit scheduled time, and visit summary.**

The user will see all their completed and missed visits in chronological order. When the user clicks on a visit, the system will open a popup containing information related to the visit. The user can then click popup's "Done" button to close the popup.



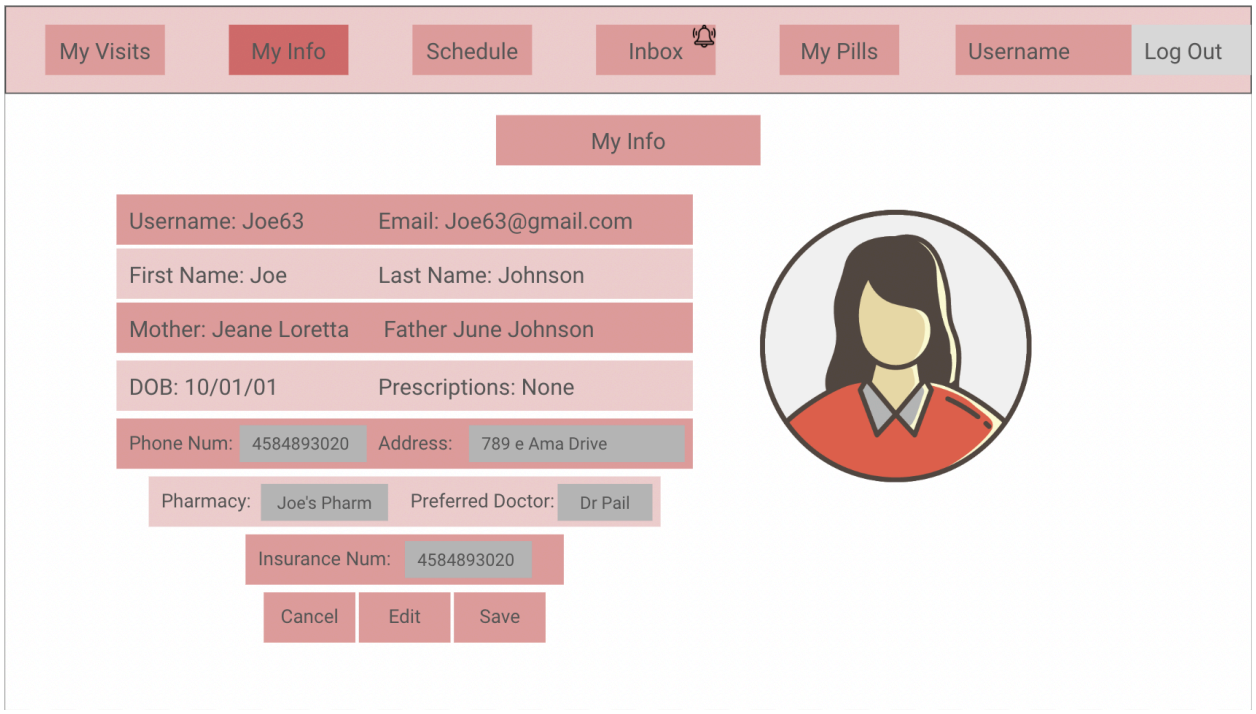
Patient Portal My Information Tab

Stakeholder Requirements:

- **Display the user's information from the database**
- **"Edit", "Save Changes" and "Cancel" buttons**
- **Editable fields: Phone number, address, pharmacy list, preferred doctor, insurance number.**
- **Non-editable fields: Username, email, first name, last name, mother's name, father's name, date of birth, prescriptions.**

All of the user's information will be loaded from the database and displayed to the screen. When the user clicks on the "Edit" button, they will be able to edit any of the information that is allowed to be edited. After making changes, the user can

click on the “Save Changes” button to save their changes. Otherwise they can click on the “Cancel” button to undo any changes.



Patient Portal Schedule Visit Tab

Stakeholder Requirements:

- **A date, time, doctor and reason field (all required)**
- **A “Submit” button**
- **Only allow patients without upcoming visits to schedule a visit.**

The user will need to fill in the required fields in order to schedule a visit. When all required fields are filled in and the “Submit” button is clicked, the system will determine if a visit for that date, time and doctor is available. If not, the user will be alerted that the visit is not available and highlight all the date, time, and doctor fields red. Otherwise, the system will create the visit and alert the user that a visit has been successfully scheduled.

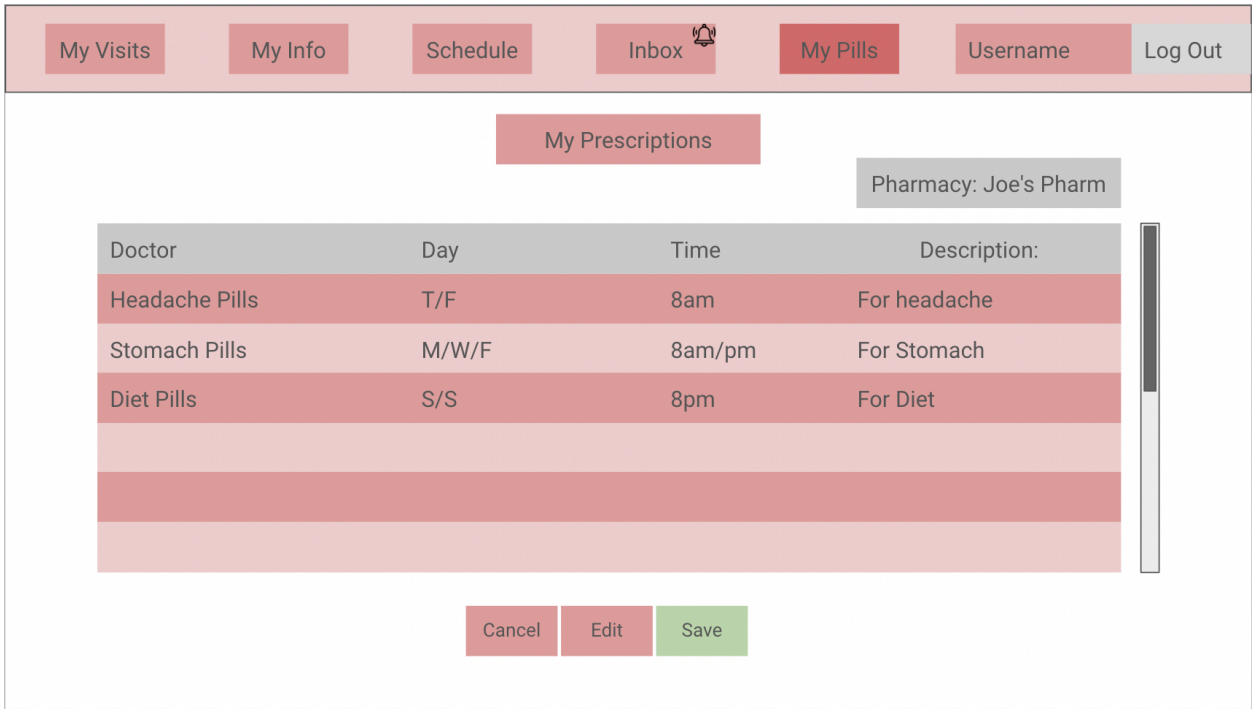
If a user already has an upcoming visit, then the system will disable all fields and buttons and alert the user that they already have an appointment, and to check the My Visits page.

Patient Portal My Prescriptions Tab

Stakeholder Requirements:

- **Display all of the user's prescriptions and their list of pharmacies**
- **Editable field: "Pharmacy list"**
- **"Edit", "Save Changes" and "Cancel" buttons**

The system will load all of the user's prescriptions and their list of pharmacies. When the user clicks on the "Edit" button, the user will be allowed to edit their pharmacy list. The user can then click on the "Save Changes" button to save their changes. Clicking on the "Cancel" button will undo any changes.



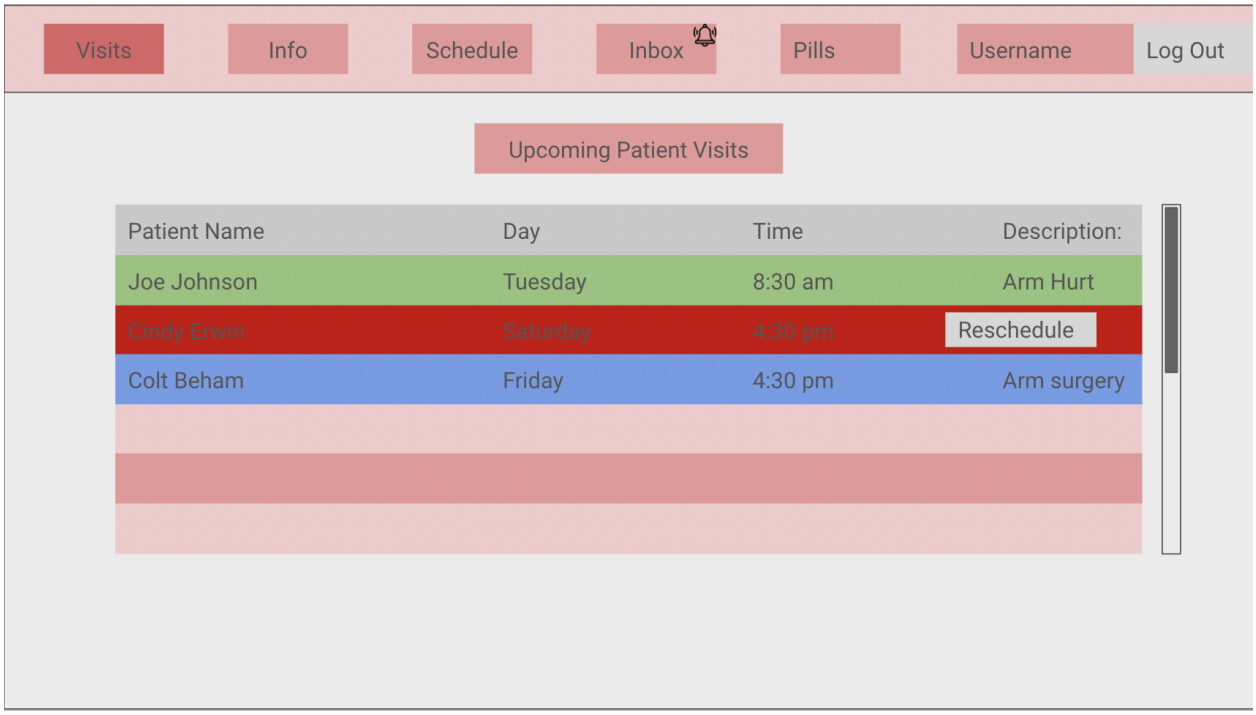
Work Portal Visits Tab

Stakeholder Requirements:

- **A label for today's date**
- **Display the current day's upcoming visits in chronological order (queue) with 1 of the 4 statuses: 'pending' (blue), 'active'(orange), 'missed' (red), and 'complete' (green).**
- **For each visit, display the patient's name and doctor's name.**
- **When clicking on a visit, it will open a popup containing more information about the visit.**
- **A "Start Session" button for the first 'pending' visit that is in the queue. When clicked on, change the status of the visit to 'in progress'.**

The user will see all of today's upcoming visits as buttons. These visit buttons will display the patient's name, doctor's name, and either be blue (pending), orange (active), red (missed), or green (complete). Clicking on a visit will open a popup containing more information about the visit: Patient Name, Doctor Name, Reason for Visit, Patient Email, Patient Phone Number.

The first visit in the queue that is pending will show a "Start Visit" button. Clicking on this button will alert the message if they are sure that they want to start the visit. If the "Yes" button is clicked, the session's status will be changed to "active". Otherwise clicking on the "No" button will close the alert.



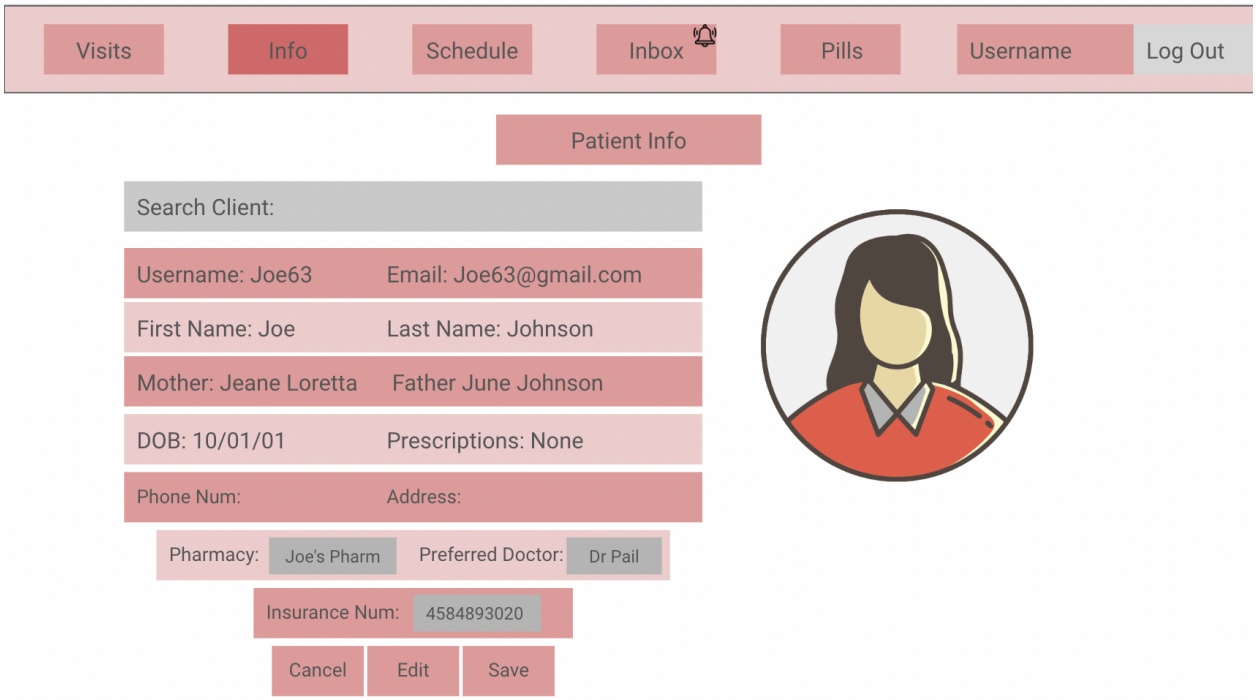
Work Portal Patient Records Tab

Stakeholder Requirements:

- **First name, last name, date of birth and email field (all required)**
- **A "Look Up" button**
- **Popup scroll pane to contain the following patient information: first name, last name, age, previous health issues, previously prescribed medications, history of immunization, prescriptions, pharmacy list, insurance number**

The user will need to fill in the required fields in order to search for a patient. When the fields are filled in and the user clicks "Look Up", the system will query

the database and display all the medical information for that patient (if found) inside a scrollable popup. If the patient is not found, an alert will notify the user that the patient is not in the database and highlight the fields in red.

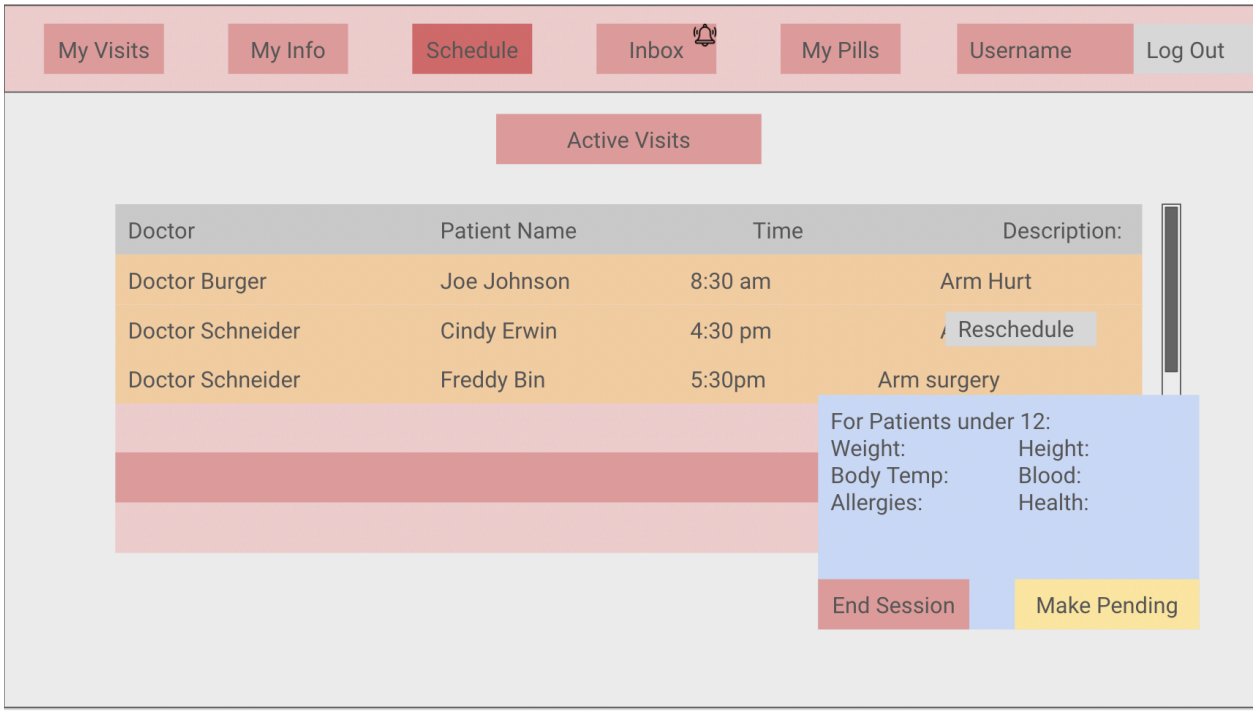


Work Portal Active Visits Tab

Stakeholder Requirements:

- **Display all visits that are "Active" in chronological order as orange buttons containing the doctor's name, patient's name, and schedule time.**
- **A popup scroll pane that includes the following fields:**
  - **Required if patient is over 12 years old: weight, height, body temperature, blood pressure,**
  - **Required: known allergies, health concerns**
  - **Optional: Extra notes, prescriptions to remove, prescriptions to add, preferred pharmacy**
- **A "End Session" button for the popup**
- **A "Make Pending" button for the popup**

The user will be able to see all the visits that are “active” and will be orange similar to the Work Portal’s Visits Tab. When clicking on a visit, it will open a popup containing all the necessary fields for the user to fill in. When all the required fields are filled in, the user can then click on the “Complete” button to complete the visit and change the status of the visit to “Complete”. If the user wishes to change the “active” visit back to “pending” (in case they accidentally made a visit “active”), then they can click on the “Make Pending” button. This will alert the user for confirmation, and if the user confirms, all fields will be cleared and the status of the visit will be changed to “Pending”.



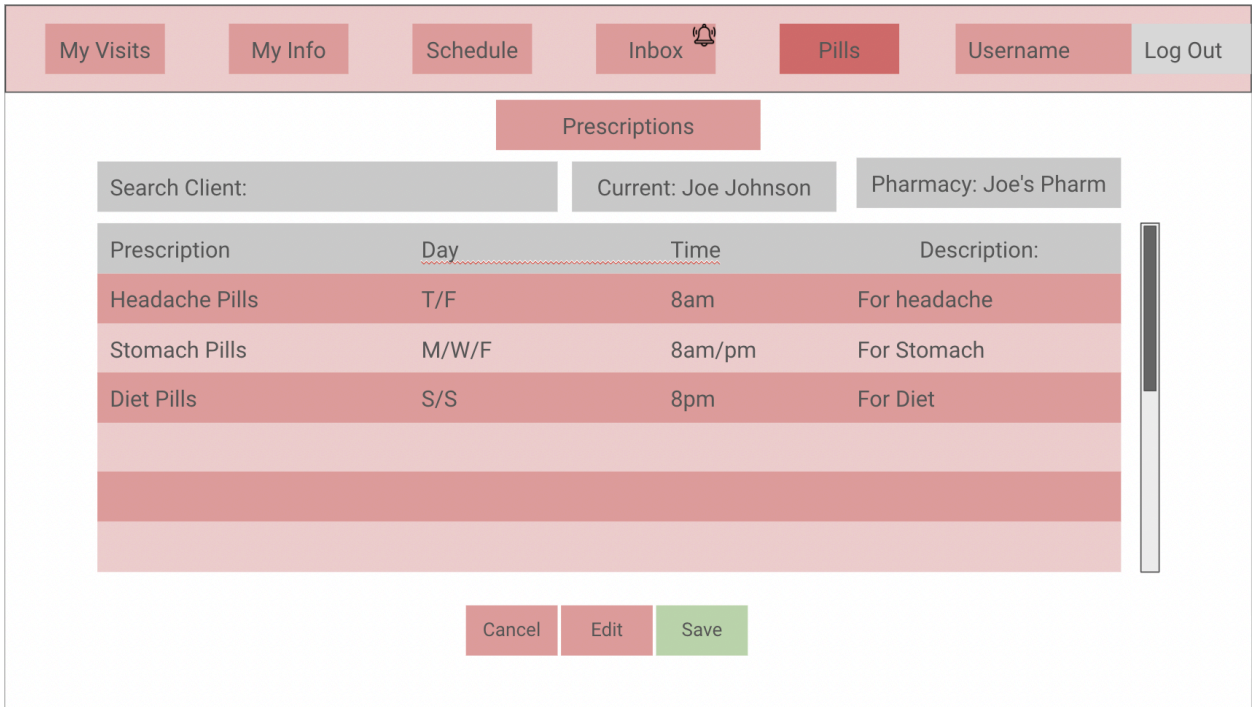
Work Portal Prescription Tool Tab

Stakeholder Requirements:

- **Required fields: first name, last name, date of birth**
- **Popup displaying the patient’s prescriptions**
- **“Edit”, Save Changes”, and “Cancel” buttons**

The user will be able to find a patient by filling in the required fields. If a patient is found, a popup will display the patient’s prescription medication and their pharmacy list. The user can then click on the “Edit” button to begin adding or removing prescriptions for the patient. If the user wishes to save the changes, they can click on the “Save Changes” button. Otherwise, they can click on the

“Cancel” button which will undo any unsaved changes and close the popup.



Credit Sheet

Team Member Name	Contributions
Johnny Salazar	**Helped write the requirements for the system and designed the main interface for Work Portal and Patient Portal.**
ZhiYue Wang	**Helped write the requirements for the system**
XiuQi Yang	
William Whittaker	**Improved page layout and helped write and clarify the requirements for the system**
Colton Hutchins	**Creation of all the UI mockups used for the walkthrough descriptions and logo**
